

Heather's Best Practices for Stone Restoration and Preservation

D/2 Do's

- ✓ Do work when the temperature is over 40 degrees.
- ✓ Do wet the stone first, this helps spread the D/2.
- ✓ Do take Before, during & after pictures.
- ✓ Do give the D/2 time to work its magic. It can take weeks to fully "develop".
- ✓ Do try to get permission.

Don'ts

- ✗ Don't forget to touch and interact with the stone before starting.
- ✗ Don't scrape lichen or pull moss unless it is wet. You can get a respiratory disease.
- ✗ Don't forget sunblock.
- ✗ Don't use metal
- ✗ Don't use sodium heavy cleaners.
- ✗ Don't use bleach.
